

React + Vite

This template provides a minimal setup to get React working in Vite with HMR and some Oxlint rules.

Currently, two official plugins are available:

- [@vitejs/plugin-react](#) uses [Oxc](#)
- [@vitejs/plugin-react-swc](#) uses [SWC](#)

React Compiler

The React Compiler is not enabled on this template because of its impact on dev & build performances. To add it, see [this documentation](#).

Expanding the Oxlint configuration

If you are developing a production application, we recommend using TypeScript with type-aware lint rules enabled. Check out the [TS template](#) for information on how to integrate TypeScript and Oxlint's TypeScript related rules in your project.
